Case Study

Westhoughton High School is an 11-16, mixed community comprehensive school situated close to the centre of the growing town of Westhoughton within Bolton Council's boundaries.

The use of ICT and new technologies is embedded across the school to support the curriculum at all key stages. For keen computer Scientists the ICT Department runs a programming club where students can learn how to create games, control instruments and even create a remote control car.

With the growing use of ICT comes the requirement for more Computers within a school, this can have an impact on many schools overstretched budgets.

Westhoughton High School had a requirement for a number of additional PC's and were introduced to Rapid IT via their sister Company LCWS Computer Recycling Ltd.

Rapid IT based in Padiham Lancashire provide high performance re manufactured PC's and Laptops to fit any budget. As a Microsoft Registered Refurbisher all hardware provided has genuine Microsoft Software installed and comes with a Rapid IT hardware warranty.

The school saw the value for money in purchasing re manufactured HP 8200 Elite SFF desktops with new solid state drives and a 12 month warranty for a fraction of the price of new PC's, allowing the school to purchase double the amount of PC's they were originally considering.

Testimonial from School

We are extremely happy with the service from Rapid IT. And would have no hesitation in recommending their services to other schools - David Hazari – Westhoughton High School.
